Rey's technologies are unique: they are devised, designed and implemented directly in-house at the company's own sites, and are all protected by international patents (which cover the know-how, mechanics and software). Rey's high-tech porcelain tiles are made using only the choicest of natural and mineral raw materials which are subjected to a process similar to that undergone by rocks on our planet over millennia. Put to high pressure and intense heat (1300°) these raw materials, carefully researched worldwide, form a material of extreme compactness, homogeneousness and non-absorbency.
